

NISHANTHINI S

Product Designer | Accessibility & Design Systems

www.mattfredette.com | thedesignernisha@gmail.com

SUMMARY

Product Designer focusing on design systems and inclusive interfaces. Approach problems through information architecture and usability research, aiming to simplify complex workflows for diverse user groups. Experienced in accessibility compliance, design tokens, and cross-functional design-to-dev collaboration. Strong in user-centered thinking, systems design, and balancing accessibility with business outcomes.

FEATURED PROJECTS

Giottus Futures: IA Consolidation & Accessibility Redesign

4 Weeks | Individual Project | Figma, Accessibility Audit Tools

- Consolidated fragmented tab structure into unified interface; reduced dwell time before order entry from 102s to ~34s (66% faster task completion).
- Validated redesign with 8+ active traders including colorblind traders; discovered unified IA inadvertently solved color-reliance problem—now first Indian fintech serving 4 crore CVD users.
- Designed three accessibility modes (default, colorblind, greyscale) via design tokens; mapped contrast to IS 17802:2021 standard.

Token Drift Detector: Design System Governance Tool

3 Weeks | Individual Project | TypeScript, VS Code Extension API, GitHub Actions

- Built VS Code extension + CI/CD pipeline that detects hardcoded values (colors, spacing, typography) and auto-fixes them to design tokens in real-time; includes GitHub Actions enforcement & dashboard analytics.
- Solves multi-product design drift: Scenario = 40 developers across 12 products with 500+ inconsistent colors & slow audits; solution = automated detection, quick fixes, centralized governance, measurable compliance.

Chennai Metro Platform: Real-Time Decision Support & Ambient Information Design

6 Weeks | Individual Project | Figma, Gemini Ai

- Designed color-coded occupancy system (green/amber/red indicators); to reduce boarding hesitation time, 7 out of 8 test participants grasped the system within 5 seconds—zero confusion or clarification needed.
- Validated with 4 distinct user personas including anxious travelers and first-time users; discovered color affordances achieved 100% comprehension without instruction—working across all literacy and language groups.
- Restructured information architecture across critical decision-making zones (concourse, platform, boarding); enabled 500K+ daily commuters to make informed choices under time pressure—language and device-independent.

Sanchar Saathi Government Portal Redesign – Information Architecture

6 Weeks | Individual Project | Figma, Figma make

- Removed non-essential banners and restructured design hierarchy; reduced task completion time by 35%, improved findability by 42% for top 20 user flows.
- Validated redesign with 5 distinct user personas across mixed-method research; discovered cleaner IA inadvertently solved cognitive overload—users now understand content intuitively without confusion or support queries.

- Redesigned design system with clear visual hierarchy and simplified navigation; established consistent information architecture across all user task flows.

EDUCATION

Hindustan Institute of Technology & Science, Padur, India

Pursuing: B.Des. Communication Design | Batch: 2023-2027

SKILLS

Design & Research: Human-AI Interaction Design Responsible AI UX, Prompt-Aware Interface Design, , Design Systems, Research driven Design strategy, Information Architecture, Accessibility (WCAG 2.1 AA), Multimodal Interaction Design, Scalable Design Systems & Patterns, Usability Testing, Interaction Design, Prototyping, Wireframing, User Flows, Journey Mapping, Design Systems, Component Architecture, UX Writing, Responsive Design, WCAG 2.1 AA, Inclusive Design.

Tools & Technical: Figma, Figma Make, Adobe CC (Photoshop, Illustrator, InDesign, After Effects), Knowledge of HTML/CSS, Design Tokens, Figma-to-Dev Workflows.

Expertise: Fintech/Trading Platforms, Design Systems at Scale, Design System Governance, Accessibility Compliance, Cross-Functional Collaboration.
